## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a first method of coating, classified in class 427, subclass 596.
- II. Claim 2, drawn to a second method of coating, classified in class 427, subclass 596.
- III. Claim 3, drawn to a third method of coating, classified in class 427, subclass 596.
- IV. Claim 4, drawn to an apparatus, classified in class 118, subclass 726.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation and require main features that are not shared by the others and vice versa. For instance, method I operates by disposing the coat batches at positions in the same distances from a position opposed to the center of the deposition beam whereas method II operates by adjusting angles alpha and beta of the deposition beams to make coating thickness within a range and method III operates by adjusting a difference between angles alpha and beta to a certain range. None of these claims requires these features in combination and each feature is a different mode of operation.

Inventions I-III and IV are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced

Art Unit: 1762

by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus could be used in methods wherein substrates other than laser end faces are coated.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II or III, etc., restriction for examination purposes as indicated is proper.

A telephone call was made to Robert Dawnes on June 5, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy H. Meeks whose telephone number is (703) 308-3816. The examiner can normally be reached on Mon., Tues., Thurs.(6-6:30), Fri.(6:30-10:30).
